PROFILE

Computer science and data analytics graduate with 12 months at RBC Wealth Management supporting data engineering, ETL, data validation, analytics, and AI-enabled business workflows in financial services. Hands-on experience with Python, SQL, Snowflake, AWS S3, SFTP, Bash, data mapping, metadata documentation, stakeholder support, and dashboard-ready analytics projects using dbt, Databricks, and PySpark.

TECHNICAL SKILLS

Programming: Python, SQL, Bash, TypeScript/JavaScript, Java, R

Data Engineering: ETL, batch processing, SFTP, AWS S3, Snowflake, dbt, Databricks, PySpark, data validation

Data Management: data quality checks, metadata documentation, lineage concepts, business rules, dimensional modeling, data lifecycle support

Analytics & Reporting: SQL views, Snowflake queries, Streamlit, pandas, NumPy, Excel, Power BI, Tableau

AI/ML: scikit-learn, XGBoost, SHAP, feature engineering, model evaluation, anomaly detection, GenAI/RAG concepts

Cloud & Tools: AWS EC2/S3, Azure, OpenShift, Docker, FastAPI, REST APIs, Git, GitHub, Jira, Confluence

EXPERIENCE

Royal Bank of Canada Wealth Management - Data Analyst Co-op, Data Engineering & AI Sep 2024 - Aug 2025

Toronto, ON

- Independently developed, tested, validated, and handed off a scheduled data migration pipeline using Python, Bash, SFTP, AWS S3, Snowflake, and Stonebranch to process batch files for downstream ingestion.
- Built validation checks and run documentation to confirm file transfer, parsing, ingestion readiness, and handoff steps for the data engineering team.
- Built retrieval-ready datasets from approximately 500 advisor forms, internal process documents, and process-owner input to support AI classification and form-selection workflows where incorrect routing could delay client requests by up to a few weeks.
- Prepared advisor knowledge content for retrieval-based assistant workflows, including document formatting, chunking, embeddings, and Elasticsearch search setup with LangChain.
- Developed and presented a PEGA chatbot proof-of-concept for advisor form and process support, translating business needs into a working AI assistant demo.
- Queried securities transaction data in Snowflake using SQL, creating views and identifying required fields to support data mapping, validation, and downstream reporting workflows.
- Worked across 4 RBC Wealth Management teams with data engineers, developers, product owners, and business stakeholders; documented requirements, testing notes, and handoff steps in Jira and Confluence.

PROJECTS

Retail Returns Analytics Platform - Snowflake, dbt, Databricks, PySpark

June 2026

Independent Portfolio Project

- Built parallel warehouse and lakehouse analytics pipelines using Snowflake/dbt and Databricks/PySpark to model retail sales, returns, product performance, store exceptions, and employee activity using synthetic data.
- Created raw, staging, intermediate, and mart layers in dbt, plus bronze, silver, and gold Delta-style tables in Databricks to demonstrate data modeling across warehouse and lakehouse architectures.
- Added validation checks, typed transformations, business-rule flags, and dashboard/analysis outputs using Streamlit to support trusted reporting and stakeholder-friendly interpretation.

F.R.A.U.D.S. - Credit Card Fraud Detection Platform

Sep 2025 - Apr 2026

Sheridan College Capstone | Top Project, Data Analytics Stream; Top 3 Overall Capstone

- Led ML, data pipeline, infrastructure, and security work for an award-winning fraud detection platform built to prioritize suspicious credit card transactions for analyst review.
- Designed a hybrid detection system using XGBoost, Random Forest, Isolation Forest, and rule-based fraud flags; achieved up to 0.95 ROC-AUC while evaluating Recall@5% and false-positive tradeoffs.
- Built synthetic transaction generation, preprocessing, feature engineering, SHAP explanations, FastAPI services, AWS EC2/S3 deployment, encrypted upload flow, and CSV/PDF reporting outputs.

EDUCATION & RECOGNITION

Honours Bachelor of Computer Science - Data Analytics

Sept 2021 - Apr 2026

Sheridan College, Oakville, ON

- Top Project, Data Analytics Stream; Top 3 Overall Capstone Project
